ECO FLOORING

Quality makes beauty

LVT FLOORING

SCHEMATIC DIAGRAM OF LVT FLOORING

- ***GREEN ENVIRONMENTAL PROTECTION***

  The main raw material of PVC flooring is polyvinyl chloride which is an environment-friendly and non-toxic renewable resource.

- ***SUPERIOR WEAR RESISTANCE***

  There is a special PVC wear layer on the surface of PVC flooring. Because of its superior wear-resistant, PVC flooring becomes more and more popular in hospitals, schools, office buildings, shopping malls, supermarkets, vehicles and other places with large flow of people.

- ***GOOD ELASTICITY AND STRONG IMPACT RESISTANCE***

  At the same time, PVC flooring has good elasticity and strong impact resistance. Under the impact of heavy objects, PVC flooring has good elastic recovery. Excellent PVC flooring can minimize the damage to human body and disperse the impact on foot.

- ***FIRE RETARDANCY***

  The fire resistance index of PVC flooring can reach B1, which means that the fire resistance is very excellent, next to stone. The flame will extinguish automatically, so it will not produce toxic and harmful gases.

- ***CONVENIENT MAINTENANCE***

  The maintenance of PVC flooring is very convenient. If the floor is dirty, wipe it with a mop. If you want to keep the effect of lasting brightness of the floor, you only need to wax it regularly.

- ***WATER RESISTANCE AND MOISTURE RESISTANCE***

  PVC has no affinity with water, so it is not afraid of water naturally. As long as it is not soaked for a long time, it will not be damaged and it will not mildew due to high humidity.
